Now we're offering many smart features in all of our tracking systems. So, by installation of any device by our team, you can ask to add any of following features:

- Remembering you to switch the lights on, if you forgot that when you're driving at night. Or you may ask our team (by installation) to do that full automatically for you each time.
- Too hot engine? We will talk to you through automated messaging system, each time you overlook the instruments warnings.
- Should the system talk to you when you have to change the oil? Or may be before "License Renewal"?

...“Enjoy the technology in its simplest & smartest version”...
